High THC Potency
We get it...sometimes you just want a lot of THC. With its twice refined distillation process, Ultra Refined retains maximum THC from the cannabis, delivering 85-95% potency consistently for those times when THC is king.

Twice Refined Distillate from CO₂
Distillate is distillate, right? Well, not quite. While most distillate is made with large-scale ethanol extraction, Ultra Refined is derived from a twice refined CO₂ extraction. A big difference for those avoiding hydrocarbons.

Cannabis Derived Terpenes
It's amazing how strains can be imitated with blends of botanical terpenes pulled from other plants. While we tip our hat to the science, we prefer our terpenes the old fashioned way: directly extracted from the plant. This maximizes the strain specific flavor & effects and sets Ultra Refined apart in a sea of botanical terpene blend options.

Choose your Mood with ease with cartridge strain stickers
Never deal with a mystery cartridge again! Simply peel off the strain sticker from the bottom right on the front of the cartridge, and stick it your cartridge so you can always choose your mood and strain with confidence.

In Washington, there's always a place for THC potency. Leafwerx Ultra Refined has featured that potency since its launch in 2017, and it continues to deliver knockout THC percentages and clear oil along with vibrant strain specific experiences.

While there is no shortage of high-potency distillate cartridges on the market, Ultra Refined sets itself apart in two major ways: its CO₂ distillation process and its cannabis derived terpenes.

Its twice refined CO₂ distillation is a hydrocarbon-free alternative to the commonly used ethanol distillation. This CO₂ distillate is then reintroduced to the terpenes extracted directly from the cannabis. This means when you are smoking Green Dream, you are tasting and feeling the effects of the Green Dream cannabis strain, not a blend of terpenes made to impersonate Green Dream.

So go ahead, enjoy high potency the Leafwerx way.
